

WASHING and CLEANING ADVISE

- Always deal with stains as quickly as possible for a greater chance of cleaning success.
- Never use inappropriate detergents on the carpet (bleach, disinfectants, etc).
- Never apply the cleaning fluid directly onto the carpet, always apply to the absorbent spotting material, cloth.
- When using detergents always use the recommended dilution ratios.
- When the carpet is dirty and wet (eg.: mud), let it dry first before vacuum cleaning. (Mud, etc. can be wiped out more easily this way).
- When cleaning with Water-Pressurized machines, please work with a distance of at least 80 cm, a maximum pressure of 2 bar and a maximum temperature of 30°C. (A standard water-hose is the best appropriate).
- Drying, let the mat dry flat on ground or hanged over a round pipe with at least the diameter of 20 cm.
- When the mat is holding liquids like oils, etc., please clean the mats only in special facilitated washing areas. (Harmful liquids must always be seperated from water before entering the drains).
- When the mat is too dirty to use further, please roll them up (pile side in), pack them properly in a plastic bag and take them to the recycling station.
